# PCSK9:

It has LDL  
receptors in  
a serious bind<sup>1</sup>

## What is PCSK9?

- » PCSK9 is a protein that plays a critical role in the regulation of LDL-C levels<sup>2</sup>
- » By promoting LDLR degradation within hepatocytes, PCSK9 reduces the concentration of LDLRs on the hepatocyte surface, resulting in increased plasma LDL-C<sup>3</sup>
- » As levels of PCSK9 increase, the number of LDLRs decreases and circulating LDL-C increases<sup>3</sup>

Unite the cholesterol conversation at **DiscoverPCSK9.com.**

**LDL** = low-density lipoprotein;  
**LDL-C** = low-density lipoprotein cholesterol;  
**LDLR** = low-density lipoprotein receptor;  
**PCSK9** = proprotein convertase subtilisin/kexin type 9.
